BioScience Laboratories Tests Product Efficacy Against *Clostridium difficile* spores on Human Hands

Bozeman, Montana, September 16, 2008 — BioScience Laboratories is one of the only facilities with the capability of testing a product's efficacy when challenged with *Clostridium difficile* spores in vitro and now on human skin. BioScience Laboratories recently received approval from an independent institutional review board to test products versus *Clostridium difficile* spores on the hands of volunteer human subjects, and has successfully completed this testing multiple times.

BioScience Laboratories' in vitro and clinical laboratories are equipped to test not only *C. diff*, but many other emerging nosocomial pathogens, including various strains of MRSA and other drug-resistant bacteria strains that have become a growing concern for infection control professionals.
